EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (GGSIPU)

B.Tech in Electronics & Communication Engineering — CGPA: 7.6

2022 – 2026

New Delhi

EXPERIENCE

STMicroelectronics

Jan 2026 – Present

Software Engineering Intern

Greater Noida

- Developed enterprise-grade full-stack features for the internal eCare platform using NestJS 11, Vue 3, TypeScript, Oracle SQL, and Docker-based workflows.
- Implemented automation testing pipelines using Cucumber BDD, Gherkin, Groovy, Selenium WebDriver, and Protractor for enterprise regression testing.
- Built STEPS, an AI-powered semiconductor recommendation platform using vector embeddings, RAG pipelines, semantic retrieval, and ChatGPT API integrations.
- Engineered production-grade ETL and knowledge-base automation systems using Node.js, Spring Boot, Oracle DB, batch processing, and restart-safe architectures.
- Won 1st Prize at STMicroelectronics TechWeek 2026 Hackathon for building AI-powered semiconductor workflow tooling.

SleekCMS

Nov 2025 – Dec 2025

Full-Stack Web Development Intern

Remote

- Engineered and published **sleekcms-next**, a production-ready SDK and NPX CLI tool enabling seamless integration of SleekCMS with modern Next.js App Router projects.
- Resolved critical npm infrastructure failures by implementing ESM/CJS dual-package support, exports correction, and stable package distribution pipelines.
- Built a Node.js-powered CLI scaffolding workflow that automated CMS setup, template generation, developer onboarding, and App Router configuration for production-grade applications.
- Developed CMS-driven templates including dynamic restaurant systems, technical documentation platforms, and searchable React 19 CRUD architectures.

STMicroelectronics

Jul 2025 – Sep 2025

Robotics Engineering Intern

Greater Noida

- Developed a 6-DOF robotic arm simulation using ROS2, Gazebo, Python, Ubuntu 24.04, and CAD/STL workflows capable of playing Tic Tac Toe against humans.
- Built backend APIs using ROS bridge and ngrok for browser-based robotic arm control and real-time simulation interactions.
- Created an STM32-based gyroscope controller using accelerometer and gyroscope inputs for mouse and keyboard emulation.

Bharat Economic Forum

Jun 2025 – Jul 2025

Frontend Web Development Intern

Remote

- Built responsive Sales and Landing Pages using React, MERN stack technologies, and ShadCN UI component systems.
- Collaborated through GitHub workflows, Jira issue tracking, PR reviews, and stakeholder-driven frontend iterations.

PROJECTS

Headless Ecommerce Platform

Next.js, TypeScript, Wix Headless CMS, Razorpay

- Built a full-stack e-commerce application with OTP authentication, inventory management, dynamic product filtering, Razorpay payments, reviews, and order workflows.
- Implemented scalable backend architecture and responsive frontend systems using reusable TailwindCSS-based UI components.

Finance Tracker with AI Receipt Scanner

Next.js, Supabase, Prisma, Clerk, Inngest

- Developed an AI-enabled finance management platform with automated receipt scanning, budgeting alerts, monthly reports, OAuth authentication, and analytics dashboards.
- Integrated Arcjet rate limiting, React Email workflows, Recharts analytics, and production-grade authentication systems.

Inclusive Realtime Chat Application

React, Firebase, Jitsi Meet, Firestore

- Built a realtime inclusive communication platform supporting persistent chat, authentication workflows, cloud-hosted messaging, and Jitsi-based video calling.
- Implemented Firebase Firestore synchronization and scalable frontend state management for realtime communication workflows.

6-DOF Robotic Arm Tic Tac Toe Simulator

ROS2, Gazebo, Python, STM32

- Developed a robotic arm simulator capable of autonomous gameplay using motion planning, simulation APIs, and real-time robotic workflows.
- Integrated embedded STM32 controller systems and Linux-based simulation pipelines for intuitive robotic interaction systems.

AI Semiconductor Recommendation Platform (STEPS)

NestJS, Vue 3, ElectronJS, OpenAI APIs

- Built a retrieval-augmented semiconductor recommendation platform supporting BOM analysis, datasheet understanding, semantic search, and AI-assisted competitor replacement workflows.
- Implemented embeddings pipelines, vector databases, ElectronJS desktop packaging, and enterprise-focused engineering search tooling.

Gaming Website Platform

React, TailwindCSS, Framer Motion, LocalStorage

- Built a futuristic gaming platform featuring Tic Tac Toe AI, Snake Game, Snakes and Ladders, persistent LocalStorage progress tracking, and minimax-based gameplay systems.
- Implemented responsive UI animations, multiplayer gameplay logic, sound systems, and state persistence across game sessions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C/C++, Java, SQL, PHP

Frameworks/Libraries: React, Next.js, Vue 3, NestJS, Node.js, Express.js, TailwindCSS, ShadCN, ROS2, Gazebo

Databases/Cloud: PostgreSQL, MongoDB, MySQL, Oracle SQL, Firebase, AWS, GCP

Tools: Docker, Git, GitHub, Linux, Ubuntu, Selenium, Swagger, Apache Maven, Postman, STM32CubeIDE

AI/Data Engineering: RAG Pipelines, Vector Databases, OpenAI Embeddings, ETL Pipelines, Batch Processing, ChatGPT API

ACHIEVEMENTS

- Won 1st Prize at STMicroelectronics TechWeek 2026 Hackathon for developing an AI-powered semiconductor recommendation platform.
- Published production-grade NPX tooling and SDKs for SleekCMS ecosystem integrations.
- Selected for internships spanning enterprise software engineering, robotics simulation, AI engineering, and embedded systems.
